TERRA SIDE
TERRA SIDE M
VERTICAL BLIND FOR PERGOLAS
VERTICAL BLIND FOR PERGOLAS

The technological evolution in the field of completely closing vertical awnings.

The vertical blind was developed to close pergolas at the side or at the front. It is also suitable to close loggias, balconies or existing structures made of wood or aluminium, and in this way offers additional protection from the sunlight, unwanted wind and prying eyes. Available in two box sizes.

Beauty in a very small space: Linear, timeless design The vertical blind is integrated in the pergola without a visible box.

Sophisticated technical solutions: Side seam guided cover. Stable shaft ø 100mm, thus reduced wrinkle formation. The revision cover can be detached, which makes dismounting of the product for repairs unnecessary. Wind resistance up to 70 km/h.
