

## FOR EACH TYPE, THE ONE

## HIGH-CLASS & EXCELLENT

The HELLA cassette awnings currently received the Plus X Award. The product range convinced the expert jury in the categories of high quality, design, ease of use and functionality.

### A sign of brand quality

The Plus X Award is one of the biggest innovation prizes in the fields of technology, sports and lifestyle. It awards brands for the quality and innovative edge of their products. Overall, the expert jury, consisting of various representatives from different industries, evaluates the individual products with regard to the seven quality seal categories of innovation, high quality, design, ease of use, functionality, ergonomics and ecology.

Awnings from HELLA are manufactured to a high standard down to the last detail and create space for relaxed outdoor living with intelligent features. The HELLA awning range features elegant designs, a diverse fabric collection and, depending on the model, smart accessories such as light and heat sources, light sensors, tilt angle adjustment and digital control.

HELLA awnings appear light and floating, almost as if they were weightless. Nevertheless they are considered to be one of the most stable solutions on the market. Slim, well-designed constructions that can be installed in a space-saving and flexible way, hide the latest technology. HELLA awnings meet the strict requirements of wind protection class 2. Functional textiles of the latest generation absorb heat, reflect sun rays, are weather resistant, tearproof and permeable to air.

Mediterranean ease, alpine solidity, urban style, fancy or linear – the awning becomes a statement that emphasises the architecture and expands the built space functionally and aesthetically.

Subject to modifications.

## CASSETTE AWNINGS

HELLA cassette awnings are protected from the weather when retracted. Elegant shapes and the wide range of fabrics with over 200 designs make them fit seamlessly into the architecture. The awnings can be either crank or motor driven and equipped with a radio control.

### C2

The very flat box features a modern design and adapts to almost any architecture. It is modular linkable and perfectly suitable to shade large surfaces. The Varioplus roller blind is the solution here for low sun.

### PAN 7040

Cubic design cassette awning - straightforwardly beautiful and uncompromisingly functional. LED lights that are integrated flushly in the arms as well as a width of 7 metres and a sloping projection of 4 metres make it a sun protection device in a class of its own.

### CLEO

The CLEO 7040, 7030 and 5530 awnings combine an elegant look with an oval cassette. Their lightweight construction and many mounting options make them flexible in use. They are suitable for wall and ceiling mounting and with their angle of inclination adjustment they can be used variably.

## OPEN AND HALF-OPEN

The awning models of the VIVA, AREIA and SOLA series (from top to bottom) round off the range. They are used wherever roof overhangs or balconies are used as weather protection or only simple weather protection is required. Like all HELLA awnings, the elegant shade dispensers are made to measure and can be driven by crank or motor.

## DESIGN CHARACTERISTICS

### LED lighting

The awning lighting LED is optionally available for the awnings AREIA 7040, VIVA 7040, CLEO 7040 and PAN 7040. Integrated at the bottom of the folding arms, warm-white ambient light illuminates the place below the awning.

### Varioplus roller shutters

Integrated in the front rail, as additional sun protection and visual cover, available for AREIA 7040, VIVA 7040 and C2.

### Infrared radiant heater

With the elegant infrared radiant heater in white or black, you can relax and enjoy your outdoor living space even in transitional season!
