

HELLA

**LOVE OF
AWNINGS**

AN AWNING FOR EVERY OCCASION

Every last detail of a HELLA awning is manufactured to the highest standard, and its smart features allow you to create space for laid-back outdoor living. The HELLA awning range features elegant designs, a varied fabric collection and, depending on the model, smart accessories such as lighting and heating, light sensors, tilt angle adjustment and digital control. HELLA awnings appear light and floating, almost as if they were weightless. Nevertheless they are considered to be one of the most stable solutions on the market. The slim, elegant

design saves space and can be installed in a number of ways, all while concealing state-of-the-art technology. High-performance fabrics absorb heat, reflect the sun's rays, are resistant to UV rays and are tear-resistant, as well as being breathable. Whether your design taste is Mediterranean laissez-faire or Alpine sturdiness, fancy or clean lines, an awning will become a statement feature that accentuates the architecture and extends the space functionally and aesthetically.

CASSETTE AWNINGS

HELLA cassette awnings are protected from the weather when retracted. With elegant shapes and a wide range of fabrics, the PAN, C2 and CLEO models blend seamlessly into the architecture. The awnings can be driven by crank or motor and equipped with radio control.

PAN 7040

This is an elegant and sophisticated awning that retracts upwards and disappears completely into a box mounted widthways. The PAN 7040 provides bespoke sun protection for puristic architectural concepts and particular design requirements.

C2

This awning stands out thanks to its elegant, flat box in which the fabric and technology are fully stowed away. The C2 boasts a functional and uncompromisingly modern design and can be combined with other units in a modular way, meaning it is ideal for large shaded areas.

CLEO 7040 | 7030 | 5530

The CLEO has a slim, elegant design with an oval cassette for space-saving installation. When opening and closing, it appears to hover, as if weightless. The lightweight construction and many mounting options make the CLEO flexible to use.

OPEN AND HALF-OPEN

The VIVA and AREIA models round off the range. They are used wherever roof overhangs or balconies provide weather protection or only a simple cover is required. Like all HELLA awnings, the elegant shades are made to measure and can be driven by crank or motor.

VIVA 7040

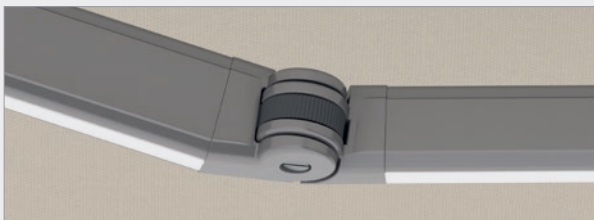

The half-open awning with many functions.

AREIA 7040 | 6030

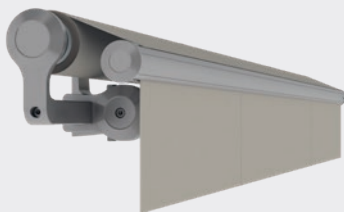

The open all-rounder with superior technology.

FEATURES

LED light fitting

Optional LED lighting is available for the AREIA 7040, VIVA 7040, CLEO 7040 and PAN 7040 awnings. Integrated at the bottom of the folding arms, warm white ambient light illuminates the area below the awning.

Varioplus roller blind

The Varioplus roller blind is the optimal solution for the AREIA 7040, CLEO 7040, VIVA 7040 and C2 awnings when the sun is low in the sky. The roller blind is integrated into the front rail as additional sun protection and a privacy screen. The drive system and fabric selection can be lowered by up to 2,500 millimetres, depending on the awning.

Infrared radiant heater

With the infrared radiant heater in white or black, you can enjoy relaxing in the external living space even outside the warm summer months.
